Using my Anki Cards for Cloud Computing theory questions

I am not your IT-Support, you are grown up, use ChatGPT if you get stuck
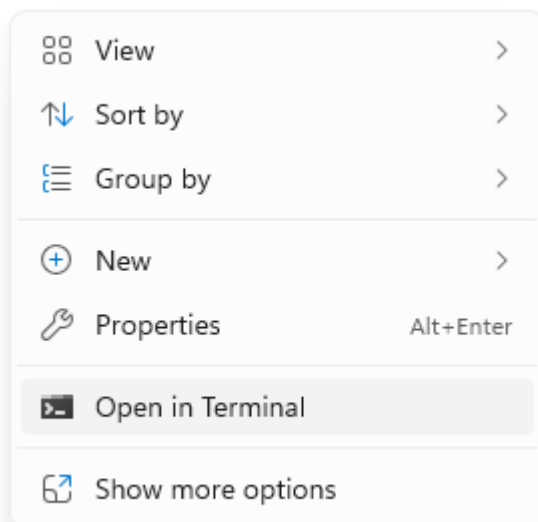

Download Anki on your PC: https://apps.ankiweb.net/#downloads

Download git on your PC (should automatically add the command "git" to your system path): https://git-scm.com/downloads/win

Create a folder you want to save the anki card in locally, for me it's for example this path: C:\Users\Flo\Documents\Arbeit\HFU_Study\2nd_try_CloudMobileApplications\CrowdAnki

For you it can be whatever, you decide where you want to save them.

Right click the folder and open the folder in the terminal:

Clone the folder from my Github:

git clone https://github.com/Mrschiss/CloudComputingAnki.git

```
PS C:\Users\Flo\Documents\Arbeit\HFU_Study\2nd_try_CloudMobileApplications\CrowdAnki> git clone https://github.com/Mrsch
iss/CloudComputingAnki.git
```
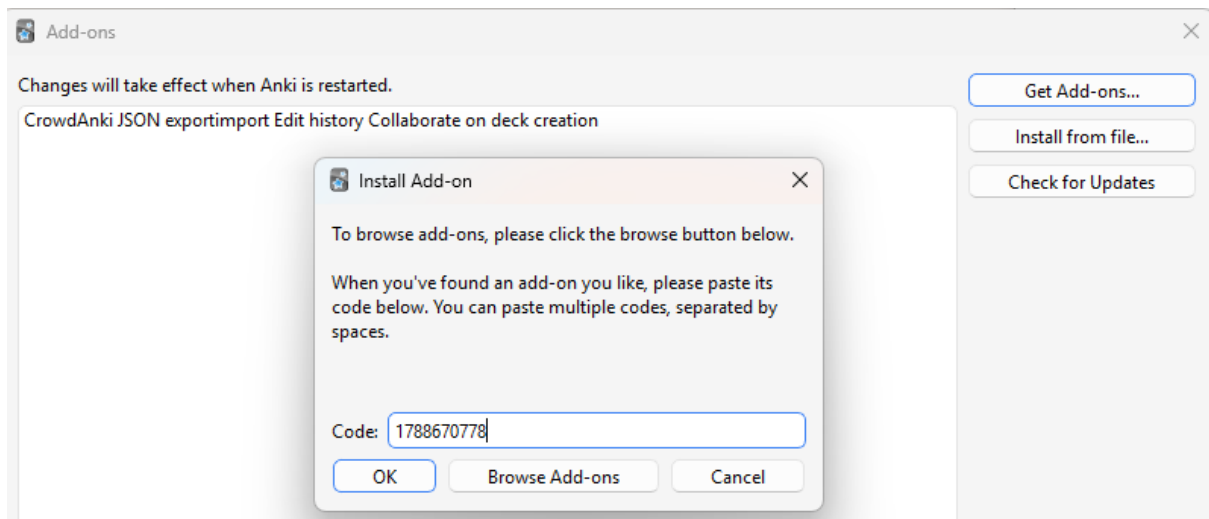

It will probably ask for your github credentials, so if you don't have an github account yet, create one.

Open Anki and update it to it's newest version (by pressing enter after opening it)

Click on tools and then add-ons

Click on get add-ons and copy this code into the code field: 1788670778

After pressing "ok" crowd anki should be installed.

Documentation to crowd anki if you are interested:
https://ankiweb.net/shared/info/1788670778

Close and reopen Anki.

In Anki on the top ribbon under file click "Crowdanki: Import from disk"

Click the folder "IBS5-CloudMobileApplication" which you cloned earlier from the github repository and then click Select Folder.

Now you should have the cards in Anki ready to learn. When you create a Anki Web account you can sync them to your android phone (apple also has anki but its overpriced as fuck).

Every week I am going to fill new Anki cards into the repository, to get the new cards I upload just go into your folder where you saved them and click "open in terminal", as you did before. When you type now "git pull" into the terminal it should update the cards

in your folder, after importing the cards again in Anki, as you did before, you should have the newest cards on your device.
